

# **Student Recruitment Platform – Detailed System Documentation**

## **1. Project Overview**

This platform is designed to connect Students, Agents, and Universities in a centralized ecosystem. It leverages AI-driven discovery, structured application workflows, and admin-controlled operations to ensure scalability, control, and high conversion.

## **2. Student Module**

The student module focuses on lead generation and conversion using AI-driven tools.

- 1 AI-based course and career recommendation (no university exposure)
- 2 Input: academic details + preferred country
- 3 Output: course suggestions, fees, career roles, salary range
- 4 Conversion triggers via popups (Apply Now / Counselling)
- 5 Student dashboard with application tracking
- 6 Document upload and management
- 7 Counselling and mock interview booking

## **3. Agent Module**

The agent module is designed for partner engagement and application processing.

- 1 AI discovery tool (similar to student but enhanced)
- 2 Application submission system (multi-step form)
- 3 Document upload and tracking
- 4 Offer letter download access
- 5 Commission calculator (based on slabs)
- 6 Deadlines tracking
- 7 White-label branding (agent logo support)
- 8 AI assistant for guidance

## **4. University Module**

University access is controlled and initially restricted.

- 1 View applications (admin-controlled visibility)

- 2 Agent ranking system (can be enabled/disabled)
- 3 Performance analytics
- 4 No access to agent identities or sources

## **5. Application Management System**

This is the core engine handling all workflows.

- 1 Application lifecycle: Draft → Submitted → Review → Approved → Offer → Deposit → Visa → Enrollment
- 2 Document management with size limits
- 3 Validation and error handling
- 4 Mapping between student, agent, and course

## **6. Admin Panel**

Admin panel provides full control over the system.

- 1 User management (students, agents, universities)
- 2 Application review and updates
- 3 Offer letter uploads
- 4 Commission setup
- 5 Subscription plan management
- 6 Deadlines management
- 7 Ranking system control
- 8 Content and news management

## **7. AI & Automation Layer**

- 1 Course recommendation engine
- 2 Career mapping system
- 3 Document verification AI (fraud detection)
- 4 Chatbot support for users
- 5 Automated news updates (visa, immigration)

## **8. Payment System**

- 1 Agent subscription payments
- 2 Payment gateway integration

- 3 Redirection to university payment systems
- 4 Payment tracking and proof upload

## **9. Communication System**

- 1 WhatsApp API integration
- 2 Email campaigns
- 3 Bulk messaging for agents
- 4 Automated alerts and notifications

## **10. Database & Security**

- 1 PostgreSQL relational database
- 2 Secure document storage
- 3 Activity logs for audit tracking
- 4 Role-based access control
- 5 Regular backups and data protection

## **11. Technology Stack**

- 1 Frontend: React / Next.js
- 2 Backend: Node.js
- 3 Database: PostgreSQL
- 4 Storage: VPS / Cloud
- 5 AI: OpenAI / custom logic

## **12. Timeline & Phases**

- 1 Phase 1: Architecture & Planning
- 2 Phase 2: Core Development
- 3 Phase 3: Advanced Features (AI, Payments, Ranking)
- 4 Phase 4: Testing & Deployment
